DHubBW

DHubBW – Student Platform for DHBW Karlsruhe

One hub for files, schedules, polls, groups, and knowledge — secure, simple, and collaborative.

status draft scope DHBW Karlsruhe

Client: DHBW Karlsruhe

What is DHubBW?

DHubBW is a lightweight, student-first platform that simplifies everyday study life. It brings files, schedules, polls, groups, and shared knowledge together in one place, so you spend less time organizing and more time learning and connecting.

Why it matters

- For students: fewer tools, clearer overview, faster coordination in courses and study groups
- For lecturers: quick polls, shared materials, and simpler course organization

Problem & Goals

Students switch between multiple apps for files, calendars and coordination. DHubBW aims to:

- reduce tool switching and friction
- improve participation and knowledge sharing across cohorts
- keep setup minimal while integrating what already exists (e.g. Rapla)

What does DHubBW offer?

While there are many tools, few address student needs end-to-end. DHubBW focuses on the essentials:

- File sharing — versions, quotas; share cheat sheets, notes, worksheets
- Calendar — timetable, deadlines, exams; canteen menu; optional ICS import/export

- Polls — quick decisions and feedback within courses and groups
- Groups & roles — course spaces, study groups; clear permissions (admin, course roles)
- Accounts — student sign-in with privacy by design (GDPR-aware)

Motivation

Students juggle multiple apps for files, schedules, polls and collaboration. DHubBW reduces that overhead with a single, consistent hub, built to encourage participation, share knowledge across cohorts and streamline course organization.

How does it work?

1. Sign in as a student and join your courses
2. Organize your materials: upload, version, and share files
3. Plan your semester with an integrated calendar
4. Run quick polls to gather decisions or feedback
5. Form study groups and keep everyone in the loop

Privacy & Security

- Privacy by design, GDPR-aware data handling
- Role-based access and Row Level Security (RLS)
- Private storage buckets for files; auditability where needed

Tech Stack

- Coming soon...

Roadmap at a glance

1. MVP: File sharing + basic calendar
2. Accounts & roles + course spaces
3. Polls + study groups
4. UX polish, accessibility, performance
